Software Engineer with 3 years of experience building scalable SaaS products and enterprise applications. Experienced across frontend and backend development, collaborating with cross-functional teams in agile environments to deliver high-impact features and reliable software systems.

SKILLS

Programming Languages: JavaScript (ES6+), TypeScript, Python, C++

Frontend: React Js, Vue Js, Next Js, Redux, Tailwind CSS, SCSS, HTML5, CSS3

Backend: Node Js, Express Js, REST APIs

DevOps & Cloud: Docker, Kubernetes, AWS, ArgoCD, Datadog, Git, Postman

Databases: MongoDB, PostgreSQL, Snowflake

AI Coding Assistants: Cursor, GitHub Copilot (used to accelerate debugging, code reviews, and feature prototyping)

EXPERIENCE

Software Engineer | JumpCloud, Remote

04/2024 - 05/2026

- **Drove a 15% ARR increase** by designing and implementing a multi-organization dashboard UI that simplified directory propagation and gave parent org admins real-time visibility into child organizations.
- **Achieved a 20% reduction in page load time** and boosted Lighthouse performance scores to 95+ by completely overhauling the legacy dashboard UI with modern React patterns and efficient data-fetching strategies.
- Doubled feature delivery speed by contributing to the migration of a monolithic frontend into independent Micro Frontend (MFE) modules, enabling separate team ownership and parallel deployments.
- **Accelerated feature development by 30%** across 5+ teams by architecting and publishing a shared, company-wide UI component library, ensuring design consistency and eliminating redundant code.
- Strengthened application security posture by proactively identifying and patching 10+ critical dependency vulnerabilities, ensuring zero security-related incidents during release cycles.
- Implemented role-based access control (RBAC) on the frontend, building permission-aware UI components and route guards to manage feature visibility across user groups.
- Mentored junior engineers on frontend development and debugging practices, accelerating onboarding and increasing team productivity.
- **Technologies:** React Js, Vue Js, TypeScript, Docker, Kubernetes, AWS, Datadog, PostgreSQL, MongoDB.

Product Engineer | EdgeVerve, Bangalore, India

09/2023 - 03/2024

- Built common login and signup UI components that were reused across different platforms and projects, cutting development effort.
- Created REST APIs for an internal reporting tool that tracked and displayed training session data, enabling teams to access structured insights without manual effort.
- **Technologies:** React Js, Javascript, Node Js, Express Js, REST APIs, MongoDB.

SDET Intern | Amazon, Bangalore, India

01/2023 - 06/2023

- Developed a QA analytics dashboard using React.js, integrating internal AWS deployment tooling to visualize testing metrics and historical defect trends, saving **5 hours/week** in manual reporting.
- Developed and maintained automated test suites using Python, Selenium WebDriver, and PyTest, covering **50+** manual test cases, **reducing testing effort by 30%** and enabling faster, more reliable releases.
- **Technologies:** React Js, TypeScript, Node Js, Express Js, Python, REST APIs, MongoDB.

PROJECTS

Gen-AI Interview Report Generator | [Code](#) | [Demo](#)

- Engineered a full-stack AI-powered interview report generation platform using React.js (Vite) on the frontend and a RESTful Express.js backend, with JWT-based authentication and MongoDB for persistent data storage.
- Integrated Google Gemini Generative AI API to automatically analyze and generate structured interview reports, reducing manual evaluation effort through intelligent AI-driven content processing.
- Implemented secure environment-based configuration management and CORS-enabled cross-origin API communication, enabling scalable deployment with a clean separation between frontend and backend services.
- **Technologies:** React Js, Vite, Node Js, Express Js, MongoDB, Google Gemini API, JWT, SCSS.

Assistly- AI Support Platform | [Code](#) | [Live](#)

- Built a full-stack AI support application with secure authentication, chatbot interactions, and a dashboard for managing settings and support workflows.
- Developed embeddable support experiences and backend API routes for chat, auth, and settings to enable a seamless user experience.
- **Technologies:** Next Js, TypeScript, Tailwind CSS, MongoDB, Scalekit, and Vercel.

EDUCATION

Odisha University of Technology and Engineering, Bhubaneswar, Odisha

Bachelor of Technology in Computer Science and Engineering

07/2019 - 04/2023

CGPA: 9.3
